I am a biologist who has specialized in the field of tropical forest restoration. I divided the last 12 years between the science and the practice in this field of knowledge, while I completed my studies in Brazil, the United States, and Germany and developed scientific and technical work for the academic, governmental and non-governmental organizations and for the private sector. I was lucky to have the chance to promote the growth of native forests in different parts of Brazil and the fulfillment of this work is one of the things I am most happy about. During the last year, besides promoting restoration on the ground itself, I looked a bit closer at ecosystem services related to forest restoration, namely, carbon offsetting and water production, relating restoration to water security and to the fight against climate change. I have always had close contact with nature during my life and this is what originated my passion for natural sciences. In my free time, I like to take care of the garden, dance, travel and spend time with friends and family.
