

São Paulo School of Advanced Science on Scenarios and Modelling on Biodiversity and Ecosystem Services to Support Human Well-Being

Rafael Cavalcanti Lembi

University of Campinas (UNICAMP)
rclembi@gmail.com

I am a masters student at the Ecology graduate program of the University of Campinas (UNICAMP), where I have been working with the relations between ecosystem services and social well-being from a social-ecological perspective. I am interested in transdisciplinary research aiming to understand how protected areas contribute to people's quality of life, especially from an immaterial perspective. My work is placed within the context of the Commons Conservation and Management Research Group (CGCommons), that also features research topics such as community-based conservation, environmental governance, social-ecological resilience. My interest in the environmental sciences began while I was still a teenager, when I obtained a technician degree in environment at the Federal Center for Technological Education of Minas Gerais (CEFET-MG). I graduated in Biology at the University of Campinas (both bachelor and teaching degree), with an abroad period at the University of Münster in Germany. During my studies, I had experience working with biomonitoring, tropical forest dynamics, bat ecology and environmental education. I am also a biology teacher.
