Short bio: I am a bachelor degree in biology, graduated from the National University of Cordoba, Argentina. I am PhD student in Biological Sciences, with a scholarship from CONICET. The title of my research is: "Population Dynamics of *Caiman latirostris*: development of a model for its conservation, incorporating possible scenarios of climate change *and sustainable use*". I want to develop a tool for management of yacaré populations, taking into consideration that the species is under sustainable use. I'm constantly studying the use of statistical, programming and ecological tools. Furthermore, I was assistant teacher of subjects of Ecology at the Universidad Autónoma de Entre Ríos, and in Environmental Problems at the Universidad Nacional de Córdoba.

My research interests focus on Conservation Biology, Population Ecology, and Sustainable Management of wildlife with a special emphasis on the Crocodilians.
