I am graduated in Biological Sciences at University Southern Cruise (2008) and obtained a specialist degree in Economic and Environmental from the Federal University of Paraná (2016). Currently, I am a Ph.D. student at the State University of Campinas. Before the beginning of my academic career, I was dedicated part of my professional career in assisting public agencies with scientific knowledge in formulates public policies. I had the pleasure to contribute in the two opportunities, first in an SMA Resolution nº 58 of June 5, 2016. Also, in a technical report to Public Ministry about the negatives impacts of waterway located in the Piracicaba city in São Paulo State. Then, I saw an opportunity to reconcile scientific knowledge with public policies. Currently, I have been concentrating my research effort in valuation of seed dispersal services performed by birds, mostly in degraded areas, which are in process of restoration. The estimated results are implement ecological importance in economic values that can be used as financial instruments for the conservation of biodiversity. My main research interests are about seed dispersal birds, valuation of ecosystem services considering the ecological value of the interactions between birds and plants, ecological restoration and the interface among science and public policies.
